As a result, and in spite of continuing studies on the subject, there are very general delays in the development of a specific research programme on the use of water in the agricultural sector. This is due to the fact that, although there have been discussions about the need to develop a research programme on water use in agriculture, there is no specific plan for such a programme. The FAO guidelines on water use in agriculture are not being followed, and the only water planning for the agricultural sector is the one that has been set up by the National Water Planning for the Agricultural Sector (NAPAS) in 1992. This has not been followed up, and the agricultural sector has not been able to develop any specific research programme.
